15

1. An ophthalmic drug delivery device, comprising:

a body having a scleral surface for placement proximate a sclera and a well having an opening to said scleral surface; and

an inner core disposed in said well comprising a pharmaceutically active agent, wherein said pharmaceutically active agent comprises nepafenac.

2. An ophthalmic drug delivery device, comprising:

a body having a scleral surface for placement proximate a sclera and a well having an opening to said scleral surface; and

an inner core disposed in said well comprising a pharmaceutically active agent, wherein said pharmaceutically active agent comprises a cyclooxygenase inhibitor.

- 3. The ophthalmic drug delivery device of claim 2 wherein said pharmaceutically active agent is a Cox I inhibitor.
- 4. The ophthalmic drug delivery device of claim 2 wherein said pharmaceutically active agent is a Cox II inhibitor.
